Right answer, right document, right away

An AI assistant giving floor supervisors trusted answers from your safety, maintenance, and quality documentation.

The problem

- Supervisors search three separate sets of documents, losing time.
- Wrong or outdated answers cause downtime, defects, or injuries.
- Document conflicts go unnoticed.

How it works

1. **Ask**

   Ask a plain-language question.

2. **Route**

   Finds applicable safety, maintenance, quality, or multiple documents.

3. **Answer**

   Answers only from your documents, with the exact page cited.

Why trust it

- Every answer cites its exact source page.
- States "not covered" instead of guessing.
- Flags conflicts and names who should decide.

Results: Tested on **[X]** real-world questions · **[Y]%** routed to the right documents · Conflict report

Next step: 4-week pilot on one production line with your real documents →
